

# AMS Machinery Health Industry Best Practices PeakVue Workshop

## COURSE OUTLINE:

Traditionally, vibration data has not been routed to the control room because it required specialized training and tools to extract any information from the data.

Emerson's PeakVue™ technology cuts through that complexity to provide a simple, reliable, indication of equipment health via a single trend. PeakVue filters enhance traditional vibration signals to focus on micro impacting, a much better long term indicator of overall asset health on any type of rolling element bearing machine.

And now, with the introduction of PeakVue Plus, users will find it even easier to take advantage of this technology.

### Who Should Attend:

- Vibration Analysis Personnel
- Condition Monitoring Personnel
- Reliability Personnel & Leaders
- Facility Technicians, Engineers & Technicians
- Maintenance Personnel & Supervisors
- Rotating Equipment Specialists
- AMS 2140 Users

Date: Jun 19, 2019

Time: 8:30am - 2:00pm

Cost: FREE

Location: Lakeside Process Controls  
7 Sylvan Way  
Winnipeg, MB  
R2R 2B9

## AGENDA

**08:30** Doors Open

**09:00** Introduction & Safety Moment

**09:30** Short-term Acceleration Transient Events

**10:30** PeakVue Application

**11:00** PeakVue Best Practices

**11:30-12:30** Lunch "*Reliability Solutions Roadmap*"

**01:00** Q&A and Hands-on Session\*

**02:00** Wrap-up

\*PeakVue Chart & Training CEUs issued to attendees
