

# Corrosion Seminar

Real-time wall thickness and temperature measurements from online equipment and piping, enabling safer and more profitable operation of producing assets

## COURSE OUTLINE:

Corrosion and erosion monitoring solutions are critical to maintaining the integrity of assets and optimizing oil and gas and chemical production. Emerson delivers real time data to enable online plant performance optimization, as well as maximized asset availability and flexibility control, with validation of chemical treatment programs, optimization of timing and scope of planned maintenance along with early detection of risk on corrosion and erosion events and actual impact.

## AGENDA:

- Introduction to Emerson's Corrosion & Erosion portfolio (Roxar & Permasense)
- A look at specific technologies within Roxar and Permasense and where to use them
- How to apply each technology and why
- Live demo of functioning sensors, data analysis, types of sensors, specs
- Applications and case studies
- Q&A

## Who should attend:

Integrity/Corrosion Engineers, Inspection, Operations

Date: Nov 13, 2019

(Lunch & Refreshments Included)

Time: 11am - 2pm

Cost: Free

Location: Lakeside Process Controls  
581, Vidal Street South,  
Sarnia, ON N7T2V8

**LIMITED SPACE AVAILABLE**
