

Regulator Seminar

Experienced a tank collapse? A pump run dry? Equipment damage because of over-pressure? A PRV station red tagged?

Correctly chosen pressure management devices ensures safe and reliable operations with less maintenance that can mitigate unplanned shut-downs and reduced throughput.

COURSE OUTLINE:

Whether you are protecting a tank, feeding a boiler, providing constant downstream pressure to make-up air units, ensuring backpressure to a pump or require an over-pressure protection device, selecting the right pressure management system for the application, ensures your equipment and your plant to run safely, reliably and longer. Emerson and Lakeside regulator experts are on hand to cover proper selection, sizing and safe installation of pressure management devices in this seminar.

Date: November 06, 2019
(Lunch & Refreshments Included)

Time: 8:30am - 4:15pm

Cost: Free

Location: Lakeside Process Controls
2475 Hogan Drive
Mississauga, ON
L5N 0E9

AGENDA

- Regulator Fundamentals
- Canadian Gas Code
- Liquid Solutions
- Fuel/Process Gas Solutions
- Steam Solutions
- Steam Traps
- Tank Blanketing & Tank Safety Systems
- Preventive Maintenance Best Practices
- Continuous Monitoring of Critical Assets
